

Digital Signage for K-12 Schools

As children grow up in a digital age and technology progresses, many schools are starting to realize the potential digital signage has to offer. Digital signs are not only attractive to view; they can be a cost-effective tool for students, teachers, staff, and visitors.

Cost-effective: Many schools frequently carry out events, whether it's fundraisers, picnics, guest speakers, etc., your school can post all the information it needs on digital signage displays. As it's extremely cost-effective, the need to print out papers can virtually be eliminated. All postings can be provided on screen for students, teachers, and staff.

Upcoming Events: Posting upcoming events are a breeze using UCView's digital signage software. It takes up only a minute of your time to setup an event and release it for your target audience.

Libraries: Digital signage can be used in a variety of areas, including the library. Use digital signs to promote a new release, display a wayfinding map, post library rules, and regulations.

Teachers' Lounge: Students are not the only individuals who can make use of digital signage. A digital sign can be installed in the teachers' lounge to provide instructors with information on conferences, PTA meetings, open house, and other teacher-related events.

Hallways: Digital displays in hallways are a great way to attract the attention of individuals. Provide students with a countdown for their next class session, provide information on fundraising events, post upcoming deadlines, and provide campus wayfinding maps.

Digital Menu Boards: Instead of handing out a weekly lunch schedule for students, the school cafeteria can have all that information available on a digital menu board. In addition to menu options, digital menu boards can provide nutritional information; promote healthy eating habits, and more.

Auditorium: Digital signage can be used to provide information on auditorium rules that students are required to abide by. Post announcements for upcoming guest speakers and promote local cultural and educational events.

Classrooms: Digital signage can be used for the classroom setting as well. Post in-class morning announcements, top-student recognition, deadlines for college applications, test scores, and class assignments.

Global Alerts: Digital displays are a great tool for releasing emergency messages. Global alerts can be pre-recorded before they are released and can even be activated from a remote location. Display a map, emergency exit routes, or lockdown information for students, staff, and faculty. In addition, audio can be released with your global alert messages.

Centralized Management: Centralized management allows for you to run your digital signage from one location. Manage your district's entire digital signage network from one system. In addition, select from a variety of free content store apps and sleek ready-made templates.
